PHYS 7326: Running Homework

Professor Halverson

January 22, 2025

Homework will be posted on a rolling basis as lectures are developed and given. This is hopefully helpful for you, and it is also more natural for me, as assignment ideas come on a rolling basis.

Instructions: Due dates will be listed throughout the document in bold letters. For the first assignment, complete all problems by the first due date. For the n^{th} assignment, complete all problems between the $(n-1)^{\text{th}}$ and n^{th} due date. I will also organize according homeworks according to topic.

1 Conformal Field Theory

- 1. Derive Ginsparg (1.3).
- 2. Prove that an infinitesimal conformal transformation quadratic in x must be of the form

$$\epsilon^{\mu} = b^{\mu}x^2 - 2x^{\mu}b \cdot x. \tag{1}$$

- 3. Prove the unitarity bound for any scalar operator \mathcal{O} , i.e. that $\Delta_{\mathcal{O}} \geq \frac{d-2}{2}$.
- 4. Do exercise 8.2 of 1602.07982.

Homework 1. Due February 10.
